Exercise 2 Explain the results the time from the programs are equals or not equals the time from stopwatch application and Why equals or not equals.

RTC

The result of the time from the program equals to the time from stopwatch application because the serial monitor of the RTC program shows every second that the LED toggle and stop when the time is 2 minutes.

Normal Delay Function

The result of the time from normal delay program dose not match with the stopwatch application because the LED toggle is delayed with the value from the stopwatch application by half second.
